

Mini Case 2

Eli Orchid has designed a new pharmaceutical product, Orchid Relief, which improves the night sleep. Before initiating mass production of the product, Eli Orchid has been market-testing Orchid Relief in Orange County over the past 8 weeks. The daily demand values are recorded in the Excel file provided. Eli Orchid plans on using the sales data to predict sales for the upcoming week. An accurate forecast would be helpful in making arrangements for the company's production processes and designing promotions.

The COO of the company approved the initial analysis and asked for the following extensions¹:

<p>To fit a new multiple regression model with dummy variables for weekdays (not the weekend), and to provide the regression equation ($d = a \cdot t + b_1x_1 + b_2x_2 + b_3x_3 + b_4x_4 + b_5x_5 + b_6x_6 + c$), along with Adjusted R^2.</p>	<p>$d = 315.0262 + 0.7163t + 116.7679w$</p> <p>Adjusted $R^2= 0.8186$</p>																																				
<p>To use all three models:</p> <ul style="list-style-type: none">• M1: $d = 1.0356t + 339.29$• M2: $d = 0.7163t + 116.7679w + 315.0262$• M3: (the one considering weekdays) <p>to predict the demand for seven days ahead (Mon, Tue, ..., Sun) and find the total weekly demand.</p>	<table><thead><tr><th></th><th>M1</th><th>M2</th><th>M3</th></tr></thead><tbody><tr><td>Mon.</td><td>398.3192</td><td>355.8553</td><td>317.7591</td></tr><tr><td>Tue.</td><td>399.3548</td><td>356.5716</td><td>320.3918</td></tr><tr><td>Wed.</td><td>400.3904</td><td>357.2879</td><td>355.6791</td></tr><tr><td>Thu.</td><td>401.426</td><td>358.0042</td><td>342.8661</td></tr><tr><td>Fri.</td><td>402.4616</td><td>358.7205</td><td>387.0337</td></tr><tr><td>Sat.</td><td>403.4972</td><td>476.2047</td><td>475.1139</td></tr><tr><td>Sun.</td><td>404.5328</td><td>476.921</td><td>474.2611</td></tr><tr><td>TOTAL:</td><td>2809.982</td><td>2739.5652</td><td>2673.1048</td></tr></tbody></table>		M1	M2	M3	Mon.	398.3192	355.8553	317.7591	Tue.	399.3548	356.5716	320.3918	Wed.	400.3904	357.2879	355.6791	Thu.	401.426	358.0042	342.8661	Fri.	402.4616	358.7205	387.0337	Sat.	403.4972	476.2047	475.1139	Sun.	404.5328	476.921	474.2611	TOTAL:	2809.982	2739.5652	2673.1048

<p>Take advantage of the fact that new demand data became available and use this new data to compare the forecasts using MAPE for days 57-63.</p>	<p>New: M: 311 T: 341 W: 357 Th: 363 F: 390 Sa: 490 Su: 492</p> <p>MAPE_{M1}: 13.81908</p> <p>MAPE_{M2}: 5.576855</p> <p>MAPE_{M3}: 4.491936</p>																																				
<p>To provide a line chart with the actual demand (including the new data) and M2 and M3.</p>	<p>EliOrchid Daily Demand</p>																																				

¹ Round numbers to four decimal points (e.g. 0.1234), unless explicitly requested otherwise.

<p>To choose the best model for forecasting daily demand at Orchid Relief for 7 days ahead and write a short paragraph explaining your choice.</p> <p>Note: this paragraph can be on page 2. The answers to previous questions must all fit on the first page.</p>	<p>[write your paragraph here]</p> <p>I choose M3 as the best model. There are two reasons:</p> <ol style="list-style-type: none">1. It's the lowest MAPE result among M1, M2, M3 models.2. It is the best fit of the actual demand from the line chart. <p>M3 is ARIMA(6,1,0) model.</p>
